NEAT! Speakers

With the invention of the in-wall loudspeaker, SpeakerCraft began a revolution. Simply mounting the speaker in the wall or ceiling got it off the floor or the shelf making it a much less obtrusive part of the system. Over the years we have constantly improved both the sonic quality and aesthetics of the product. From careful color selection for the molded elements to the fine mesh of the grille. We are always looking for ways to make our speakers more appealing.

After listening to the requests our dealers were receiving from some architects, we are now offering yet another speaker option. The new NEAT! series of in-wall and in-ceiling speakers have no external flange. That means the grill material will cover the baffle and drivers and leave no additional edge between the speaker and the wall surface. Best of all we have managed to incorporate our award winning pivoting AIM technology into all of the in-ceiling models.
