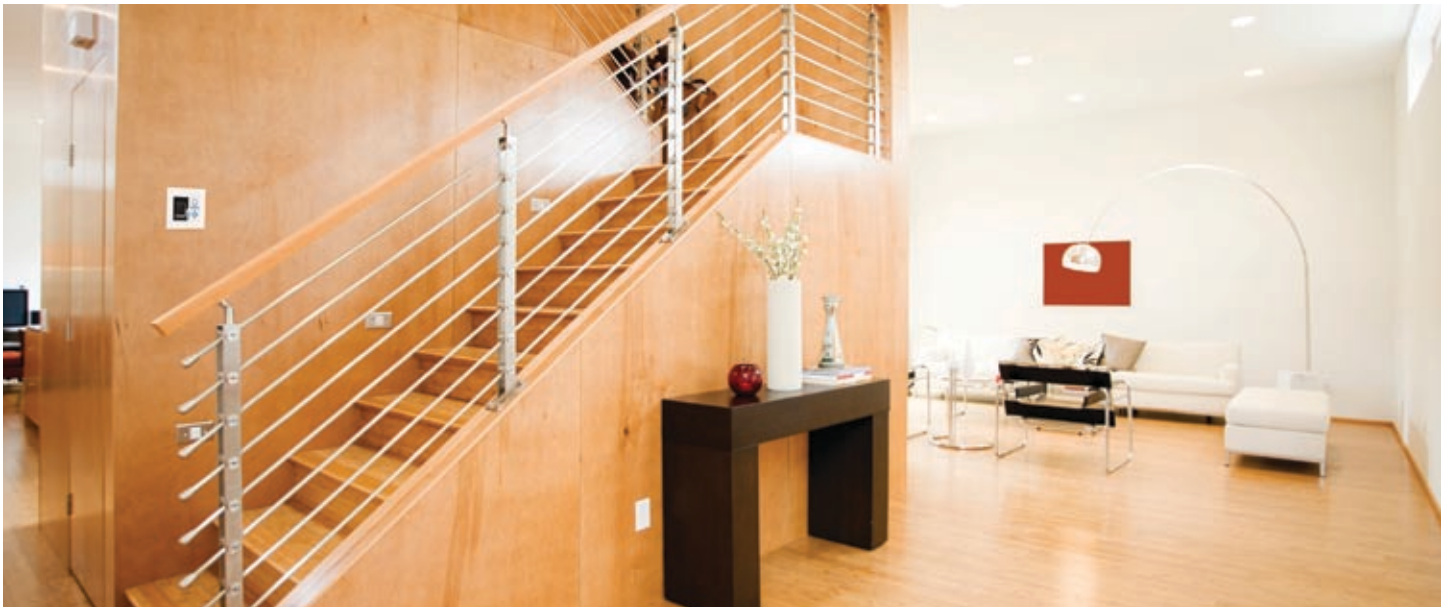
MZC Multi Zone Control

MODE Music on Demand Experience

Music and movies have become an integral part of the home. Controlling the electronic components should be as easy and enjoyable as the entertainment itself. That was the inspiration for the MZC or "Multi-Zone Control" system. Simple to operate and easy to navigate the MZC/MODE system will allow you to control your entire system from any room in the home via an attractive keypad on the wall or wirelessly with a MODE Free or any iPhone® or iPod Touch®.

SpeakerCraft®



MODE/MZC System

The MODE/MZC system offers up to eight zones of audio/video distribution. Each zone is independent and allows you to select and control your own source regardless of what anyone else is enjoying in other areas of the home. The majority of the equipment can be hidden away in a cabinet or closet leaving only the keypad, flush mounted speakers and an optional video display in the various rooms. This makes your entertainment both easy to access and easy to live with.

Dock as many as six iPods and listen to them throughout the house. The MODE will allow you to scan through your music as though your iPod was in the room. Scroll through song titles, artists, genres and playlists and simply click to select them. Accessing your music has never been easier.

The MODE Free will let you have the same control in the palm of your hand as you walk through the house or even on the back deck or by the pool. The operation is identical to the wall mounted MODE with the additional feature of being able to control any zone in the house.

The latest addition to the MODE family will turn your iPhone® or iPod Touch® into an integrated remote control and connect it directly to your existing home Wi-Fi network. Now the same device you use to hold all of your contacts, calendar your time and handle your email will be able to control your entertainment system with the push of a single button.

The MODE/MZC system is powerful, simplistic, flexible and capable of providing you with years of incredible music and movies, all at your fingertips.
