

Ruckus™ series

 SpeakerCraft®

If It Doesn't Exist

For many years homeowners were satisfied with large cabinet speakers because there was no alternative. If a person wanted sound of any quality the choices were limited to cabinet finish and several established brands. Although sonic performance had improved greatly from the old console systems that had occupied a massive footprint in the living room, newer component systems still required a substantial space dedicated to electronics and loudspeakers.

No one had an elegant solution to this problem and people simply accepted the only products available in order to enjoy music in the home. Due to their physical size, few people would even consider speakers in more than one room so listening was relegated to the living or family room.

Invent It!

In the early eighties SpeakerCraft saw the conflict between electronic technology and interior design and set out to address the problem. Since a speaker had to be present in a room in order to function, the key was to mount it in such a way so as to make it as discreet as possible. The result of this effort was the first in-wall speaker to be produced for residential applications.

Since then we have gone on to create a number of elegant solutions to allow you to enjoy music and movies in every area of the home. The Ruckus series of rock speakers, featured here, are designed to blend into your landscape and let you take your music outdoors. Enjoy the experience of being surrounded by beautiful sound while you enjoy your patio, deck or pool.

RUCKUS

Ruckus 8

Shown in Gray granite

Woofer: 8"
Tweeter: 1"
Weather Resistant
Sealed Voice Coil
Sensitivity: 91 dB
Power Handling: 120 Watts
Impedance: 8 Ohms

1

Outdoor Living

Today music is being consumed at a higher rate than at any time in history. This is primarily due to how accessible music has become. Listening in the car, at the beach or while flying in a plane is so commonplace we don't even think of it as extraordinary. Listening in the backyard or around the pool is just as common and just as important to most people. SpeakerCraft has been producing speakers for these environments for years. Now these speakers can easily blend into the landscape and become a seamless part of your home entertainment system.

2

Rocking The Garden

The Ruckus series is a collection of speakers in rock-like enclosures designed to produce high-fidelity music while literally becoming part of the landscape. Made of durable, reinforced poly-resin, these speakers will survive under the harshest environmental conditions. The cabinet itself is color-matched to the U.V. resistant lacquer coating that covers the speaker so if the cabinet is chipped by a careless gardener or a curious child, it will simply expose the same color underneath. This will result in years of musical enjoyment.

3

Making The Music

Carefully selected components are used to recreate the musical nuances in today's digital recordings. A great deal of effort has gone into improving the Ruckus series from our original ROX speakers. The result is better frequency response and more sound pressure for greater outdoor coverage and improved musical clarity. Now whether you are looking for soothing background music in the garden or a dance party on the deck, the Ruckus series will deliver.

ROCK

Enhance The Experience

Great sound and great looks make the Ruckus series the perfect addition to any outdoor area. You will be pleasantly surprised by the compliments you will get, as friends and family are impressed by music that seems to come from nowhere. As you entertain or simply relax outside you will wonder how you ever got by without music surrounding you and your guests. You may also want to consider SpeakerCraft's Outdoor Elements, a line of weatherproof cabinet speakers that mount under eaves, on exterior walls or anywhere else that you want to fill with sound.

Woofer: 6"
Tweeter: Two 1"
Weather Resistant
Plays L&R From One Unit
Sealed Voice Coil
Sensitivity: 91dB
Power Handling: 80 Watts
Impedance: 8 Ohms

1

A Host Of Options

Depending on the size and configuration of the landscape, there are several Ruckus models to choose from. Standard two-way models are available in 5, 6 or 8-inch versions with cabinet sizes that increase with the size of the woofer. There is also a 6-inch Dual Tweeter version that plays both stereo channels from a single enclosure. This is a great option when speakers need to be placed further apart. There is also a dedicated 8-inch subwoofer with its own amplifier to round out the bottom end regardless of which outdoor speakers you choose.

2

Thinking It Through

Because of the rain and snow to which the speakers will almost surely be exposed, the cabinet has an integrated drainage system. This allows the water to be flushed away from critical electronic components increasing the durability and longevity of the speakers. There is also a security tab on the bottom of each enclosure for securing the speaker via a cable or chain to an adjacent tree or water pipe to avoid theft.

3

Lasting Performance

All of our speakers are known for build-quality and durability. The Ruckus series is another example of this fact. Our design team knows the best sounding speaker is useless if it fails under pressure. From the rock-like housings to the specific components, these speakers are built to last. You can count on years of carefree enjoyment when you choose any of the Ruckus models.

RUCKUS

Enjoy The Outdoors

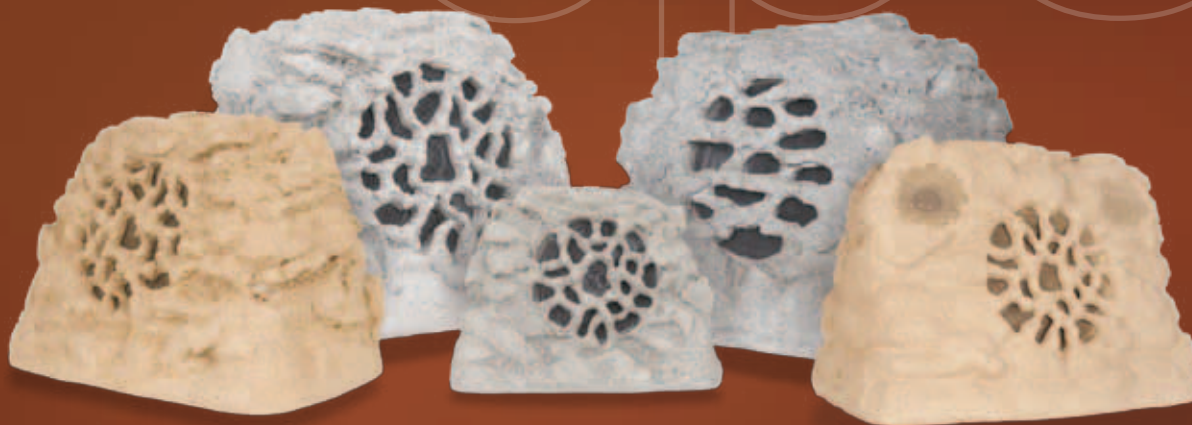

If you have never experienced music in the backyard, around the pool or on the deck you are in for a pleasant surprise. Music will enhance every activity from family gatherings to Super Bowl parties, from wedding receptions to quiet candlelit dinners with your spouse. You may even consider music in the flowerbeds around the front door. Guests will be amazed as music greets them before they even ring the bell. Regardless of your lifestyle, the Ruckus series of outdoor speakers will enhance your life your time with family and friends.

Ruckus 8 Sub System

Shown in Gray granite

Woofer: 8"
Weather Resistant
